The Moon

TRANSCRIPCIÓN AUDIO

The Moon is a satellite that goes around the Earth. It takes 28 days for the Moon to go around the Earth. The Moon is about 320.000 kilometres from the Earth. It is about $\frac{1}{4}$ the size of the Earth. That means the Earth is four times larger than the Moon.

The Moon is a dry land that has millions of craters with rocks and dust. The temperature on the Moon is -110°C at night which is very cold, but it is 130°C during the day which is very hot. The hottest temperature on Earth is about 60°C , so the Moon can get over twice as hot!

There is no sound in the Moon, because sound waves go through the air, and there is no air in the Moon. In addition, there is no wind, rain or any other type of weather on the Moon.
